

# Man Made Materials

# Man-Made Materials

**Man-made materials are products and materials that have been produced by combining or changing raw materials in order to make something different.**

**Man-made materials do not occur naturally. They must be created. These materials are often formed as the result of chemical reactions.**

**We sometimes refer to man-made materials as synthetic.**

# Metal- Steel

iron ore

coal

limestone

# Glass

sand

limestone

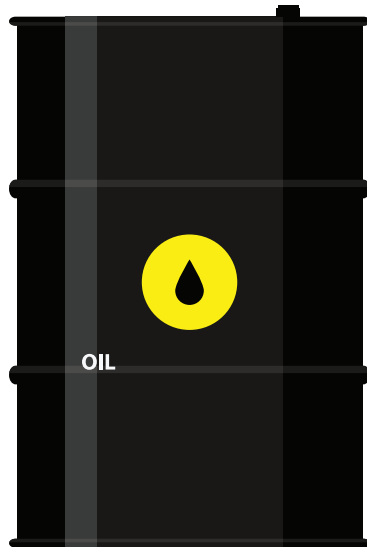

soda ash  
(calcium carbonate)

# Plastic

petroleum (oil)

chemicals
