

The nervous system is how the brain sends messages throughout the body.

Sensory Nerves: SIGHT

(Label the diagram using the information provided.)

Light reflecting from objects enters the eye. The optic nerve sends the information to the brain.

The cornea, located at the back of the eye, changes light into electrical signals.

Research and Write

Choose one of the four other senses (hearing, touch, smell or taste). Learn more about how this sense sends information to the brain via the nervous system. Explain the process. Include a diagram.
