

Biomes in Australia

Discussion Questions:

- 1) What types of animals and plants thrive in the various biomes in Australia?
- 2) How have they adapted to their environment?
- 3) What factors impact upon their survival?

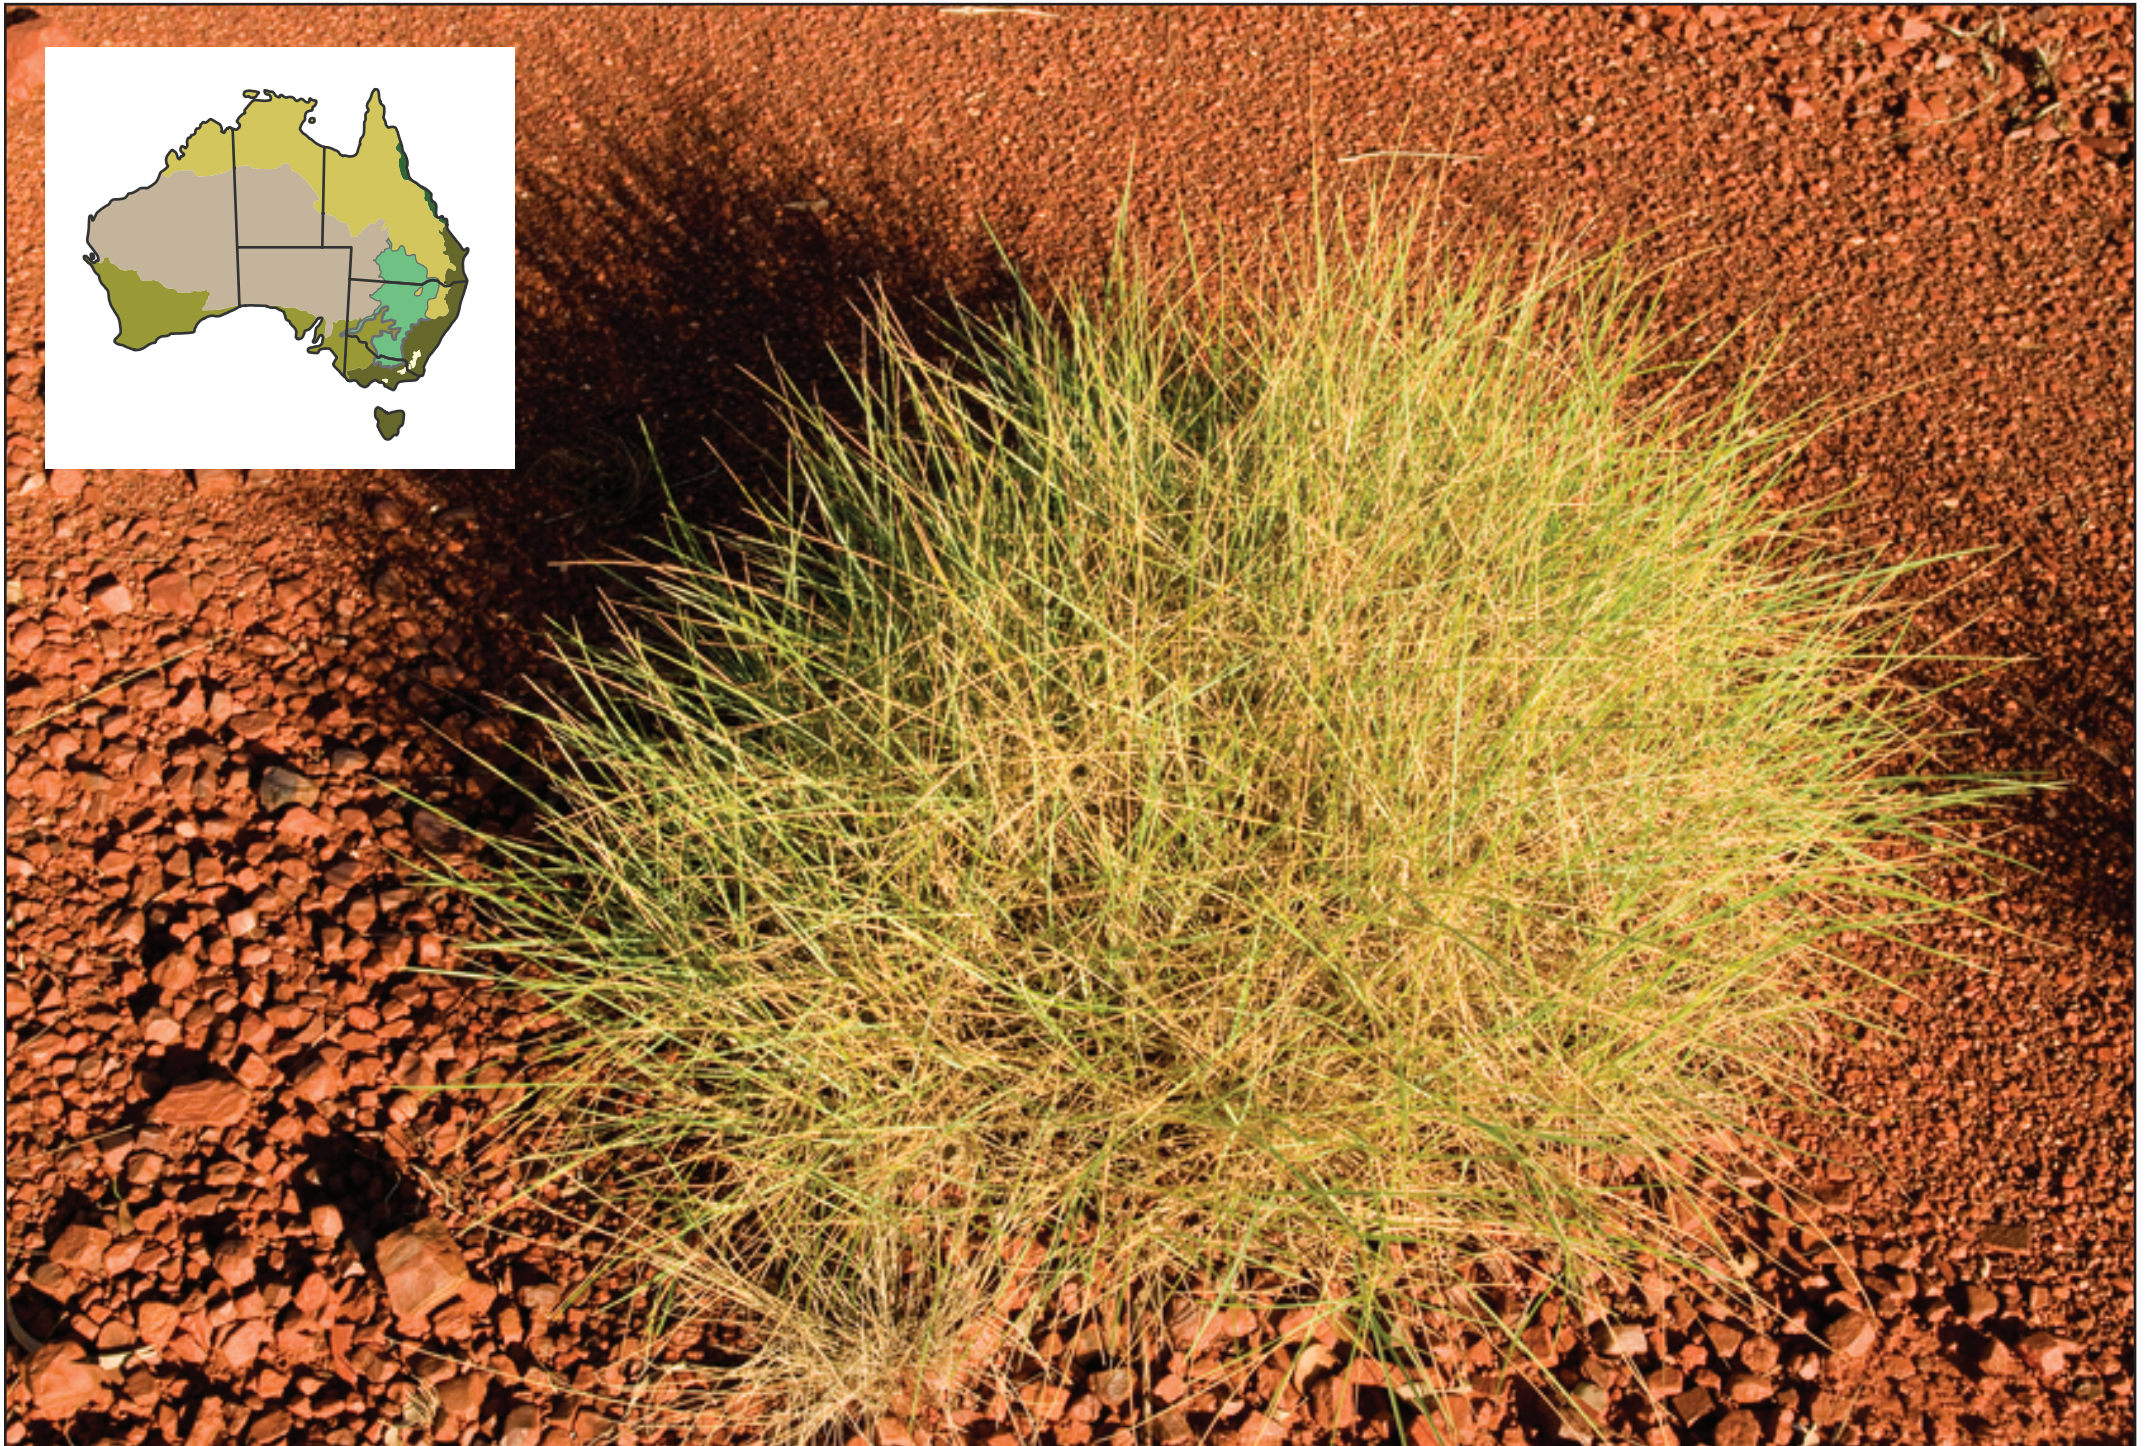

In which region would you be likely to find a green tree python?

In which region would you be likely to find a thorny devil?

In which region would you be likely to find large leafed ferns?

In which region would you be likely to find spiky spinifex grass?

Biomes are groupings of plants and animals have common characteristics based on climatic conditions.

Research Activity:

- Select a biome found in Australia.
- Describe the conditions that are common to the region.
- Investigate the types of native animals and plants that live together in the environment.
- Find out how the plants and animals have adapted to survive in these conditions.
